FINESOURCE

FScloud

The FScloud is a unified Communications Platform which includes services such as telephony, video, presence and messaging, allowing the Carrier to supply, in a simple and integrated manner, a wide range of services to both the residential and the business markets.

FScloud Characteristics

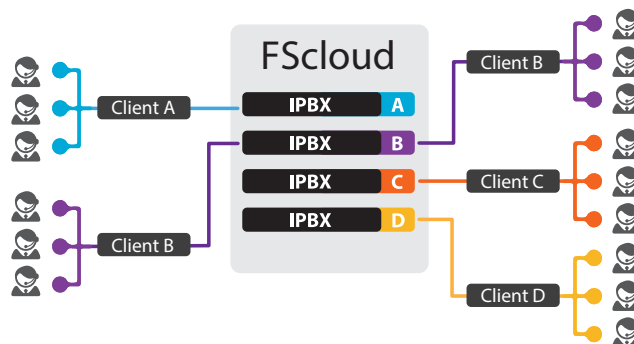

- Administration Web Interface
- End User Web Interface
- High scalability
- Resilience
- Compatible with any CPE

Hosted PBX/IP Centrex

The Hosted PBX/IP Centrex solution provided by the FScloud Platform eliminates the management and maintenance costs from the on premises solutions. With this new platform the enterprise can be focused in their business areas.

The Hosted PBX solution provided in a multi-tenant architecture by FScloud is characterized by high scalability and easier management.

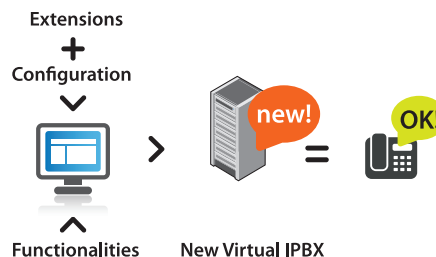

Main features of the Hosted PBX solution

- Telephony Features: Follow-me, call forwarding, DND, among others
- Voice-mail
- Call Recording
- IVR - Interactive Voice Response
- Audio Conferences
- Temporal Conditions
- List of contacts
- Fax-Server - Email to Fax & Fax to Email
- Call Center
- Operator Panel / Operator
- Audio Conferencing Scheduling
- Integration with Business Applications

Provisioning System

One of the most important pieces in solutions for Telecom Operators is the Provisioning System for Equipment's and Services. The Provisioning System provided by FScloud is simple and intuitive.

The Provisioning of a new IP PBX is made through a Web Interface in a few minutes. The hardphone Provisioning is also in a similar way. This allows the use of non-specialized man-power to deploy the hardphones.

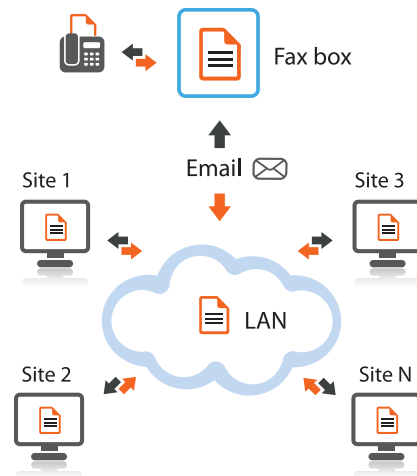

Fax Server

FScloud platform integrates a FAX Server solution. This solution allows more than just sending mail to Fax and Fax to Email. This solution is characterized by the ability to manage simple processes of send/receive fax, as well as, heavy and complex structures where the same fax has to be delivered through a chain of contacts that may be in distinct IP PBX.

The management and monitoring of sent and received fax's is made by Web interface.

The fax server has also the functionality of burst fax. With the Web interface is very simple to see the state of any fax.

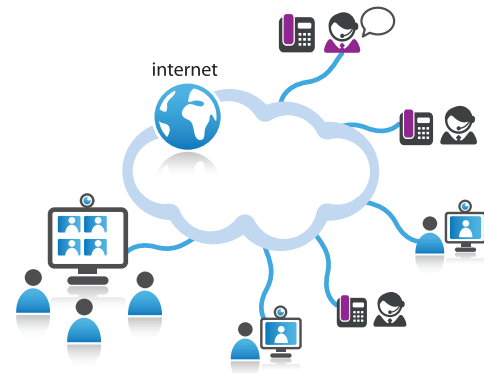

Meeting

The Meeting module allows the Telecommunications Operator to provide a Tele meeting service in a centralized way. This service may be deployed as standalone or integrated in the FScloud Platform.

Main features of the Meeting solution

- Web Access
- Email calendar integration
- Video
- Voice
- Global chat and private chat
- Desktop share
- Document presentation
- Meeting recording
